

## Final Project Proposal

1. Introduction: For the final project, I decided to create a website for my cookings. I'm a big fan of cooking and I cook a lot in my free time. This website serves as a platform for sharing some of my experiences and recipes, as well as my personal documentation of my cookings. The website will contain a home page which serves as an introduction for my website; a gallery page which shows the pictures of some of my previous works; several recipe pages including detailed ingredients and processes of my cooking; a page that links to other resources that I found useful in cooking; and finally an about page showing my introduction and contacts.
2. Structure

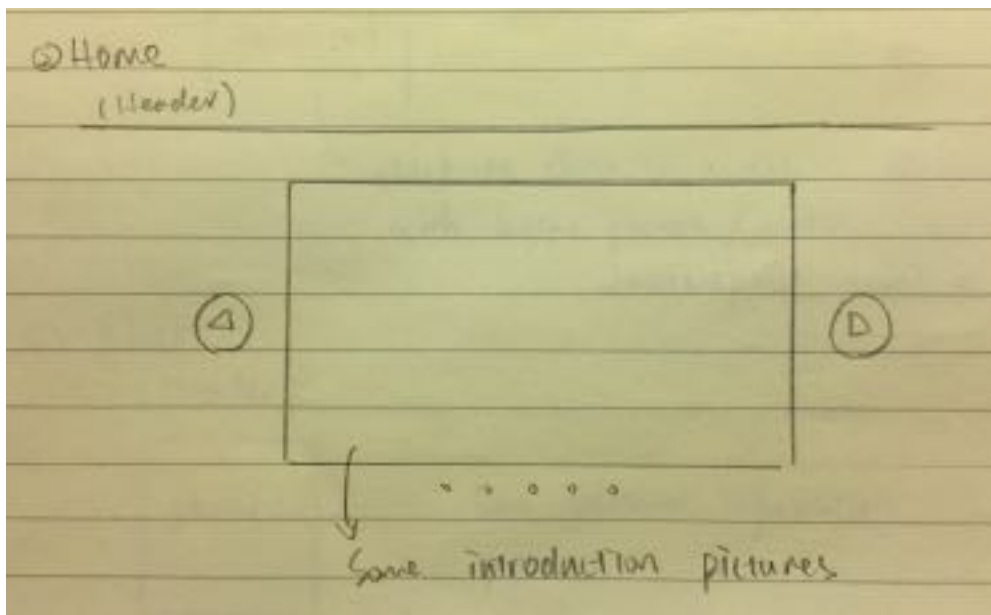

### 3. Wireframe

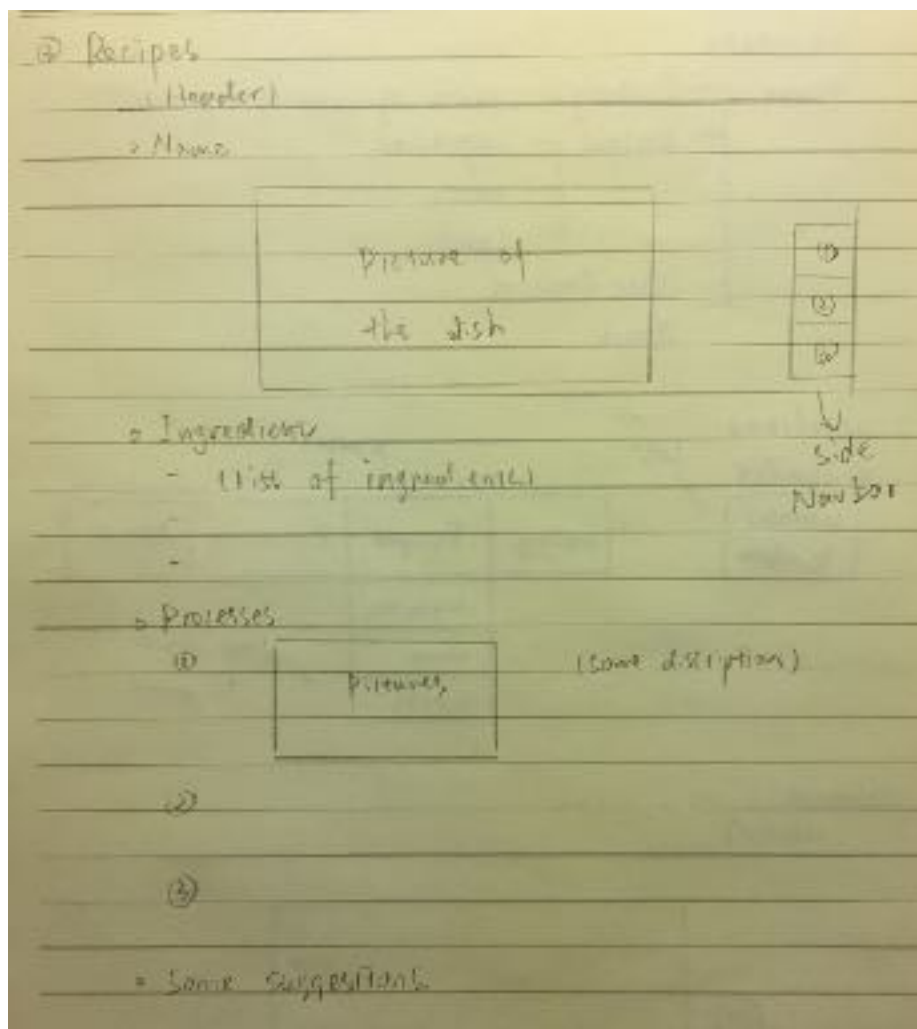

- (1) Header: The header contains a logo and a navigation bar on the top left linking to different subunits of the website.

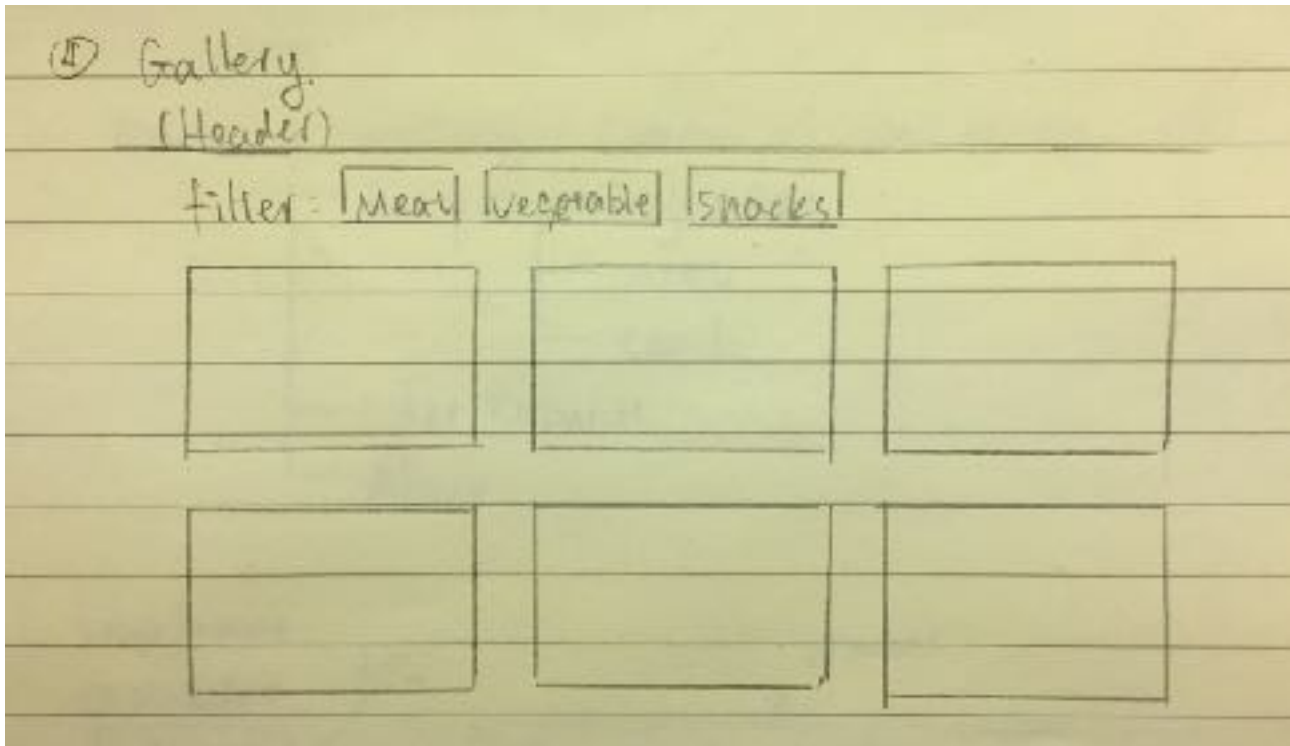

(2) Home page: the home page will be a big slide show showing some of the introduction pictures of the website.

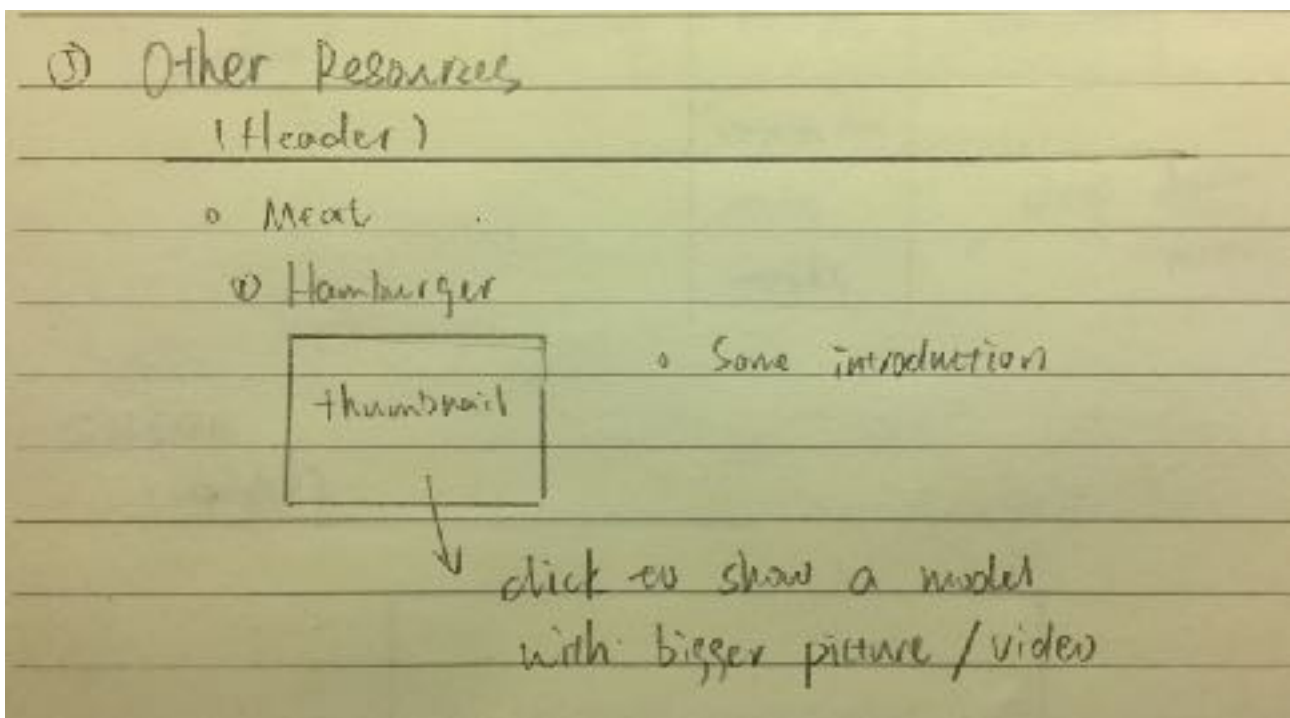

(3) Recipe page: the recipe page contains three part: the overall picture showing the dish; ingredient list; the detailed process. A navbar on the side will be linking to different regions of this page.

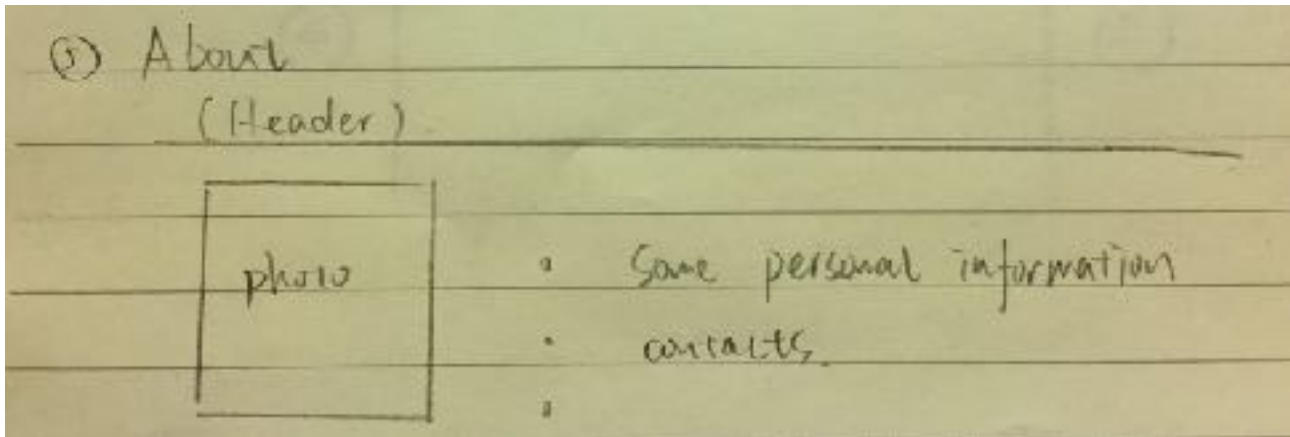

(4) Gallery: this page is a gallery showing pictures of some of my cookings. The images can be filtered according to different features.

(5) Other resources: in this page, there will be thumbnail images and short information for several useful resources. When clicking on the images, a model will pop up, showing detailed informations or videos.

## (6) About page

## 3. Inspirations

<https://www.mbusa.com/mercedes/index> (front cover page)

<http://allrecipes.com/recipe/21176/baked-dijon-salmon/?>

[internalSource=staff%20pick&referringId=1642&referringContentType=recipe%20hub](#)

(recipe page)

<http://www.ygallerynewyork.com> (Gallery)

4. Skills learned: Basic HTML, CSS, JS coding, bootstrap styling, jQuery, Green Sock Animation, mix it up.

## 5. Skills need to learn:

adding videos to the model

modifying bootstrap designs

make webpages look good

\*cook better dishes
